-i- FUNCTION: PART OF THE BINDING-PROTEIN-DEPENDENT TRANSPORT SYSTEM
FOR ALEPHA-GLUCOSIDES SUCH AS SUCROSE, MALTOSE AND TREHALOSE.
-i- SUBCELLULAR LOCATION: Periplasmic (Probable).
-i- SIMILARITY: Belongs to the bacterial extracellular solute-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                            30-MAY-2000 (Rel. 39, Created)

J. Neurosci. 17:8083-8092(1997).
-i- SUBCELIJULAR LOCATION: Integral membrane protein.
-i- TISSUE SPECIFICITY: PARAPINEAL ORGAN.
-i- PIM: Some or all of the carboxyl-terminal Ser or Thr residues may be phosphorylated (By similarity).
-i- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

BINDS GUANINE NUCLEOTIDES.
SUBUNIT: Heterodimer of two subunits, one of which binds GTP.
SUBCELLULAR LOCATION: Cytoplasmic (Probable).
SIMILARITY: BELONGS TO THE GTP-BINDING ELONGATION FACTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S0002579; SUP35.

SIMILARITY: Belongs to the Toll-like receptor family.
SIMILARITY: Contains 1 TIR domain.
SIMILARITY: Contains 9 leucine-rich (LRR) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                kappa-B activation, cytokine secretion and the inflammatory response (By similarity). SUBUNIT: Binds TLR2 via their respective extracellular domains. Binds MyD88 via their respective TIR domains (By similarity). SUBCELLULAR LOCATION: Type I membrane protein. Plasma membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SWISS-PROT entry is copyright. "Functional analysis of 14 genes that constitute the purine catabolic pathway in Bacillus subtilis and evidence for a novel regulon controlled by the Puck transcription activator.";

J. Bacteriol. 183:3293-3302(2001).

-I- FUNCTION: Uptake of uric acid.

-i- SUBCELIULAR LOCATION: Integral membrane protein (Probable).

-i- SUBCELIULAR induced during limiting-nitrogen conditions (glutamate plus ammonia) and is induced during limiting-nitrogen conditions (glutamate). Expression is further induced when allantoin or uric acid are added during limiting-nitrogen conditions.

-i- SIMILARITY: BELONGS TO THE XANTHINE/URACIL PERMEASES FAMILY.
                                                                                                                                                   SACBA

J. FUNCTION: Arylphorin is a larval storage protein (LSP) which may serve as a storage protein used primarily as a source of aromatic amino acids for protein synthesis during metamorphosis. It is a constituent of the sclerotizing system of the cuticle, and serves as a carrier for ecdysteroid hormone.
                                                                                                                                                                                                                                                                                         MEDLINE=90037032; PubMed=2808410; Willott E., Wang X.-Y., Wells M.A.; Willott E., Wang X.-Y., Wells M.A.; "cDNA and gene sequence of Manduca sexta arylphorin, an axomatic amino acid-rich larval serum protein. Homology to arthropod
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright. TITLE OF INVENTION: RECEPTIOES OF G-COUPLED PROTEIN
TITLE OF INVENTION: RECEPTORS, AND COMPOSITIONS AND METHODS THEREOF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CURRENT APPLICATION DATA:
